INTERVIEW RECORDING

for

LAW ENFORCEMENT

EASY TO USE

“The best solution on the market for recording interrogations, period.”

- *Macon County Sheriff Dept.*

“Many officers are using the system well before the bill goes into effect. It is improving the quality of our work.”

- *City of Decatur PD*

BENEFITS

Reduce administrative costs

Digitally record all interviews directly onto your IT network.

Keep evidence secure

Video clips can be labeled and accessed from any police computer. No more stacks of video tapes that can be misplaced or broken.

Share data department-wide

Search for and access recorded interviews from any police computer

Close more cases

Courts are asking police to provide better evidence all the time. Video lets you provide proof of Miranda warnings, shows juries the power of body language, and protects your officers from unwarranted accusations.

IVR (Intelligent Video Recorder)

JUST THE FACTS

HOW IS IT DONE?

Law enforcement officials have discovered the power of the IVR (Intelligent Video Recorder), a powerful recording device and software program that allows easy digital recording of and access to custodial interviews.

1. Detectives enter time, date, case number, or any other relevant details about the recording
2. Video is recorded directly to your internal IT network
3. Video can be accessed by any network computer

WHAT IS THE PROCESS?

The IVR is connected to the camera in your interview room. Recordings are labeled, and stored on your internal network. Recordings are then accessible using an intuitive, user-friendly screen.

The screenshot shows a software window titled "Enter information for this Session". It has four tabs: "File Summary Information", "Session Control", "Meeting Data", and "Event Marker Names". The "File Summary Information" tab is active, showing several input fields with the following data: File Prefix: 655, Case Number: 8554388, Officer ID: SHR-550, Interview Subject: James Hurley, Charge: Homicide, and Date/Time: 10:00:35 AM. To the right of the form is a text block: "Custom data fields with drop-down boxes let you tag recordings on-the-fly and easily find them later."

HOW WILL THE SYSTEM PAY FOR ITSELF?

The IVR quickly pays for itself, not only in reduced personnel costs, but in saving the time and administrative costs associated with unreliable evidence.

Costs associated with no recording or traditional tape recording:

- Transcription costs
- Physical storage space costs
- Officer time spent preparing reports from handwritten notes
- Making copies and preparing excerpts for courtroom use
- Contested evidence

Potential cost savings with IVR recording:

- Allowing officers to focus on the suspect, not on note taking
- Reduced transcription costs
- Protection for officers against abuse claims
- Protection from perjury and coercion accusations
- No physical storage costs
- No time spent making copies or preparing excerpts for courtroom use
- No need for officers to spend time preparing reports from handwritten notes
- Less contested evidence
- Reduces lengthy pretrial hearings as to what occurred during interrogation
- Reduces risk of civil litigation

Discover the benefits of the IVR (Intelligent Video Recorder) for your department.
