

- **lower costs**
- **better liability protection**
- **instant access to any video**
- **more POSSIBILITIES**

## DIGITAL VIDEO *for* BUSINESS

### EASY TO USE

Video for businesses has reached a whole new level. Now you can offer your customers and employees the best possible digital video security resources – while protecting your bottom line against liability claims like never before.

Cameras can be installed anywhere you need them. Video can be labeled, stored and easily accessed at a later date for surveillance or online video training. Web-enabled options make it easy for anyone in your organization to securely connect to your video while online, and let you manage it without tying up all your network bandwidth.

### BENEFITS

#### **Lower costs**

IP technology takes advantage of your existing IT infrastructure, reducing cabling and administrative costs.

#### **Keep customers and employees safer**

Adding additional cameras and recording capability is easy and affordable. Wirelessly connect to parking lots or remote warehouses, and monitor video from any location.

#### **Liability protection**

High quality video can be stored affordably for as long as you need to provide evidence to fight liability claims.

#### **More options**

Sharing video over the web can help you collaborate with other branches, provide services to remote locations, or compile a world-class video training library. The possibilities for business are endless.

# Digital Video for Business

SECURITY, SURVEILLANCE AND BEYOND

## Security

**IP Vision** is a security solution that works with your existing IT infrastructure and IP technology. Your business can add cameras wherever they're needed, and record, monitor and configure the system from a central location. Video clips are accessible through an easy-to-use software interface.

## Quality

The quality you need is available with the **CAM product family**, which provides high quality digital video to continuously monitor, record, create and play back video clips. Industry leading compression technology gives you the ability to capture video from 6 to 30 frames per second per camera per your budget requirements. Featuring the **CAM XP** product, the CAM line gives you the built-in storage capacity to store video from 30+ to 180+ days, with the option to add more drives to get up to one full year of video storage.

## Innovation

The **IVR (Intelligent Video Recorder)** brings new capabilities to business event recording. This DVR with on-the-fly tagging features lets you record and manage a library of video that is easily searchable and can be accessed from anywhere via a secure Internet browser.
